

Limits for Improving Precision Agriculture

The benefits of using GM (Genetically Modified) seeds, special fertilizers and special pesticides, can't be fully taken advantage of because the required adjustment is too complex and the systems and equipments for dosage currently utilized are too obsolete.

- You can't calibrate your seeding or fertilizing machine "on the go"
- You can't adjust the dispenser exactly to the desired seeding rate
- You can't adjust the dispenser to the desired exact fertilizing rate
- You can't control every row separately
- You can't use all the benefits of information technology (IT)
- You can't;....And all the possible available solutions on the market only carry to:
 - More and more complex systems
 - More and more expensive machinery
 - More and more "external" devices LIKE THESE... ADDED™ TECH is really a "step forward" in resolving problems, a paradigm in innovative solutions. SEEDING DEVICES

FERTILIZING DEVICES
